SCAFFOLDING

At Quinn Contracting we offer a wide range of scaffolding services. We have the people and resources to fill the requirements of any job, from safety training to material and labour supply to large-scale scaffold construction.

❯ **quinncontracting.ca**

As an accredited scaffolder training institute, certified through the Scaffold and Access Industry Association (SAIA), Quinn Contracting is positioned to offer not only labour and equipment for your scaffolding needs, but also training in all three types of scaffold systems (Frame, Tube & Clamp, System). Our Scaffold Hazard Awareness and our Basic Scaffold Competency and Inspection courses provide the knowledge required on a job site to safely construct and maintain a scaffold system. These courses have been presented at numerous industrial facilities, and are useful alternatives to having a full-time scaffolder on site if only a minimum of scaffolding is required.

For larger scaffolding requirements, Quinn Contracting is equipped to supply both scaffold labour and materials. We have a talented and dedicated group of scaffolders currently working for Quinn, and we are constantly increasing our numbers in all service areas. Our work force includes all levels of contract competency, from grounds people to foremen and project coordinators. We have a broad range of scaffolding experts whose long-term experience in the field will ensure that your projects are completed in a timely, efficient, and safe fashion.

Quinn Contracting can supply scaffold materials for any size project at competitive rates. We offer both parts and labour rate and blended rate (all inclusive of labour and materials) options, depending on your project requirements. We are outfitted to supply the three main scaffold systems, Tube & Clamp, System Scaffold, and Frame Scaffold, and also offer scaffold wagons, suitable for material movement and hoisting, for your transportation needs.
